The Light Idea

## About Fenos

Fenos products are developed by experts with several years of experience in professional lighting design and product design.

Fenos aims to produce lighting fixtures which can fulfill the needs of a professional lighting designer. Using high end optics to create a variety of light distributions as well as being aesthetically beautiful, makes Fenos among top choices for architectural lighting.

Fenos comes from the word "Fanoos", name of a traditional oil lamp mainly used in Middle East region.

# TECHNICAL COMPETENCE

## 1 Focus On Light Distribution

In a professional lighting design project, light sources with several light distributions are required. Using special optics of the latest technology makes Fenos products suitable for a wide range of applications:

From uniform wallwashing for vertical illumination to narrow beam spots to create shadows and enhance modelling effect, low glare optics for office applications or oval distributions for corridors.

## 2 Thermal Design

All Fenos products are equipped with LED light sources. For LEDs, proper heat dissipation is a key element to ensure the quality and life time of the product. During the design process, a lot of attention is paid in order to ensure maximum heat transfer and in the production line, quality control department makes regular checks and measurements with high accuracy thermometer to check the performance of heatsink and ensure that the temperature on LED is far below the allowed limits of LED temperature.

This will maximize the life time of LED and also consistency of color characteristics.

## 3 High Quality LEDs

LED is the heart of a light source.

In all Fenos products, LEDs are supplied from the best manufacturers in the world to ensure the constancy in color and quality of light.

## 4 Aesthetics of light fixtures

It is not only about the light distribution but also the visual appearance of the light fixture is important. Minimalistic design and high quality finishing are also important features of Fenos products.

# Innovative Products Overview

## Vaswa Maxi XS

Are you looking for a light fixture to high light vertical elements of up to 20 meters and still energy efficient? Are you thinking of creating bright spots on the floor to create a more drama feeling in an outdoor environment? Check specification of Vaswa Maxi XS in page 184.

## Nian XS

In many indoor architectural lighting applications, an extreme narrow spot light distribution is required to highlight visually important elements.

Nian XS which is a extension of formerly existing Nian family is a perfect solution for that. Check specification of Nian XS in page 60.

## Roni

Roni is the other word for flexibility in lighting. With one size and concept of downlight you can have a wide range of light distribution. Check specification of Roni in page 94.

## Felka Mini

Felk Mini track lights have the widest range of light distributions. Having special optics from extreme spot (5°) to extreme wide (60°) and wall washer or oval light distributions, makes Felka Mini a perfect solution for high end museums, galleries and retails. Check specification of Felka Mini in page 110.

## Darklans

Darklans is equipped with an advanced optic developed by Bartenbach GmbH. This small but still powerful downlight has an aperture of only 8mm, and even when the fixture is on, one can hardly see any light coming out of it. A real dark light. Check specification of Darklans in page 14.

# Indoor Lighting

Interior architecture is strongly influenced by lighting. Fenos has a wide range of products for professional indoor lighting with different light distributions, sizes and lumen outputs.

# Darklans

Ceiling Recessed

## Darklans

Ceiling Recessed

CODE	F180
Light source	LED
Power (W)	9
luminous flux (lm)	800   850
Color Rendering (Ra)	>80
Color Temperature (K)	3000   4000*
Body Color	White   Black   Silver

IP 20 70mm

**Supply Voltage:**  
220-240 Vac, 50Hz

**Driver:**  
DALI|Dimmable Version Available  
upon request

**Recommended Applications:**  
Residential | Office | Shop

Because of using a special double focus optic, the light is coming out of a very small hole with just 8mm diameter. As a result, the glare of the light reduced to minimum, so it seems off when the light is on.

\*Customized body colors and other color temperatures (CCTs) are available upon request

# Nian

Ceiling Recessed

Accent lighting is one of the key elements in architectural lighting design. Spot lighting on objects, attracts people's attention to that object, and creates the feeling of drama in the space. We as human being like shadows. A completely uniform lit environment resembles a cloudy day for us. The extreme narrow beam of Nian XS family, generated by a sophisticated high tech optic and a powerful compact light source is a good solution. In retail environment, increase level of contrast between light and dark spaces, gives a feeling of more luxury and special feeling to the customer.

Vertical illumination is becoming more and more important for architects and lighting designers. It is important for architects because it reveals the feel of the space, and helps the place to become even more inviting. It is important for shop owners because it makes the shop become more visible and appear brighter from outside. In an office it helps to provide better visual comfort.
