STYLE

REDHEN are hot-dip galvanized baskets filled with stone that may be used for fencing purposes and laying out elevations, as well as many other architectural forms. Simple design combined with quality material is the mark of an elegant product.

The excellent functional qualities of the **REDHEN** baskets such as durability, physical damage and weather resistance, providing the sense of privacy, good acoustic insulation, and easy maintenance are the unique features hard to find in other products fitting the same architectural purpose.

QUALITY

NATURE

Green design is a design trend which is becoming increasingly popular, and here at REDHEN, we are trying to advocate its principles by filling the space with positive elements.

Galvanization is an eco-friendly process which does not affect the environmental balance and hot-dip galvanized steel is a perfect material for reuse or recycling. Stone is natural and found everywhere but you can go even further and fill the REDHEN baskets with recycled material such as crushed concrete, brick, tile and many others.
